AMENDMENTS TO THE SPECIFICATION:

Page 8, amend the paragraph beginning at line 19 as follows:

Furthermore, the beams 62 need not necessarily extend downwardly from the mount body 54 to house the mirror 50 within the mount body 54. An alternative arrangement is shown in Figure 9, that broadly corresponds to the view shown in Figure 7 and so like reference numerals have been used for like parts but with the addition of a prime. In this embodiment, the flexible neck 68' is L-shaped such that, in addition to the flexible upright portion 86' that allows deflection as the mirror 50 deforms, there is a horizontal portion 88' that connects the upright portion 86' to the mount body 54. The horizontal portion 88' of the beam 62' allows vertical movement of the edges of the mirror 50, as indicated by the arrows in Figure 9. This is beneficial because the mirror 50 may be deformed to adopt shapes that require relative movement around the edge 74 of the mirror 50, e.g. to adopt radially-extending ridges and troughs thereby creating an undulating mirror edge 74.
